Financial Transaction Performance Dashboard

An interactive **Power BI** dashboard that analyzes financial transaction performance: revenue, tax, fees and success/failed/pending status. It includes year-over-year comparisons across customer segments, states, merchant categories and occupations.

Objective

To give finance and business teams a single view of:

- How much transaction value is being processed, and how it changes year over year
- How much is collected in tax and fees
- How much value is lost to failed or pending transactions
- Which customer segments, states and merchant categories drive the most activity

---

Dashboard Pages

Page	What it shows
Overview	Headline KPIs, transaction status split, state-wise and segment-wise breakdown, monthly trend, transaction type summary
Analysis	
Transaction	Transaction-level detail table (customer, segment, type, state, amount, tax, fees) with the same filters

---

Key Metrics (DAX Measures)

- Total Amount
- Total Transactions
- Average Transaction Value
- Total Tax
- Total Fees
- YoY % for amount, transactions, tax and fees (vs previous year)

Features

- **KPI cards** with year-over-year change indicators
- **Dynamic metric switcher** to change charts between metrics (e.g. Total Amount, Tax, Fees) using a single slicer
- **Transaction status analysis**: Success vs Failed vs Pending, by amount
- **Geographic view**: transaction value by state
- **Segment and demographic view**: customer segment and gender breakdown

- **Monthly trend** area chart
- **Slicers** for Year, Occupation and Merchant Category
- **Page navigation** and back button for easy movement between pages

---

Data Model

Table	Description
`finance_transactions`	Fact table: transaction ID, type, status, merchant category, state, amount, tax, fees
`customers`	Dimension table: customer name, segment, gender, occupation
`Date`	Calendar table for year/month analysis and YoY calculations
`KPI` / `Dynamic Metric`	Helper tables that power the dynamic metric switcher

---

Tools Used

- **Power BI Desktop**: data modeling, DAX, visuals
- **Power Query**: data cleaning and transformation
- **DAX**: measures and year-over-year calculations

Key Insights

> Replace with your own findings, for example:

- Success rate of X% with Y% of total value lost to failed transactions
- Top 3 states contribute Z% of total transaction value
- [Segment] is the highest-value customer segment
- Fees and tax grew X% vs the previous year

How to Use

1. Download `finance_Analysis.pbix`
2. Open it in **Power BI Desktop**
3. Use the slicers (Year, Occupation, Merchant Category) to filter
4. Use the metric slicer to switch what the charts display

Screenshots

Add screenshots of both pages here, e.g. `![Overview](images/overview.png)`
